Shrewsbury, MA | (978) 905-1840 | brandonjleone@gmail.com | [GitHub ↗](#) | [Personal Portfolio ↗](#)

EDUCATION

Assumption University, Worcester MA

January 2026

Bachelor of Arts, Marketing

Areas of Focus: Consumer Behavior, Market Research & Analytics, Statistical Modeling, Strategic Campaign Architecture

SKILLS:

Languages: JavaScript (ES6+), TypeScript, SQL, HTML, CSS,

Backend: Node.js, Express, REST APIs, Zod Validation, pg-format, Data Ingestion / ETL

Databases & Cloud: PostgreSQL, Relational Database Design, Amazon S3, MongoDB

Infrastructure: Docker Compose, Linux VPS Hosting (Ubuntu), Nginx, Certbot SSL, JWT

Frontend: React, Tailwind CSS, React Router, Recharts, Framer Motion

Marketing/Analytics: Excel, IBM SPSS, Qualtrics, Data Visualization, Performance Dashboards, PowerPoint, Canva

PROJECTS:

Marketing Operations & Data Ingestion SaaS Platform | (React, TypeScript, Node.js, Express, PostgreSQL, Docker, Amazon S3, Zod, OpenAI API)

- Architected and deployed a multi-tenant B2B SaaS platform engineered to automate the cleansing, normalization, and aggregation of malformed third-party Google Ad campaign data
- Engineered a lightweight data ingestion stream by leveraging PapaParse's beforeFirstChunk event hook and regex patterns to strip non-tabular metadata headers and currency symbols from raw exports
- Optimized database performance and eliminated excess database execution by replacing iterative loops with a single-pass bulk INSERT/UPDATE query, utilizing pg-format
- Enforced absolute runtime data integrity by deploying defensive Zod validation schemas at the API gateway to filter out unmapped properties and coerce data string formats into primitive values
- Configured a token-efficient analytical summary layer that dynamically extracts rolling 14-day campaign KPIs into a minified JSON payload for the OpenAI API, delivering automated insights while protecting token thresholds
- Implemented a decoupled asset architecture using the AWS S3 SDK to stream creative digital promotional assets directly to a cloud storage bucket, mapping the files back to active data layers using lightweight relational database references
- Frontend deployed on [Vercel ↗](#) | [GitHub Repository ↗](#)

Wachusett Brewing Company Campaign | Data Analytics (Academic Framework)

- Aggregated and modeled consumer data collected via in-person audience interviews and secondary data providers (Statista) using Excel and Qualtrics.
- Conducted deep-dive demographic research and market segmentation to identify core customer acquisition trends within the regional 21-25 age demographic for a craft brewery
- Evaluated cross-channel ad spend allocations, regional placement guidelines, and platform regulatory constraints to draft multi-flight promotional campaigns
- Identified systematic reporting overhead caused by manually aggregating fragmented, non-tabular third-party ad engine spreadsheets, directly establishing the functional requirements for an automated data ingestion software tool

WORK EXPERIENCE

Lowe's Home Improvement, Westborough MA

May 2023 - August 2023

Cashier

- Provided customer service and processed transactions using POS systems in a fast-paced retail environment

United Parcel Service, Shrewsbury MA

May 2022 – August 2022

Package Handler

- Organized and processed high-volume shipments, ensuring accuracy and efficiency in logistic operations
